

## Implement Software Like a Pro

Consider this scenario:

**You've decided to implement a new piece of technology for your employees.**

**You have invested thousands of dollars in the software, and your IT team has put the time and resources into the setup, implementation, and configuration of that software.**

So, you launch the software—and nothing!  
What did you forget? The training, perhaps?

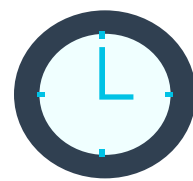

**The employees knew it was coming, knew its intended purpose, but were they properly trained on how to use it and how it can make an impact on their own productivity?**

**You're not alone. Lack of training is one of the biggest reasons why software fails within companies. And the ramifications of that could go beyond the lost time and revenue spent on the technology setup.**

Consider these statistics:

**\$4.5 billion is spent each year on new business software technology.**

**Companies spend more than 10 hours per year per employee on technical/software skills training.**

**It costs an employer 6 to 9 months' average salary to replace and train a new employee.**

**\$13.5 Million per year is the amount lost per 1,000 employees due to ineffective training.**

**A new employee is 42% more likely to stay when he or she receives the training needed to do his or her job properly.**

**Don't let your software fail!**

**Let BLR Learning help you get a comprehensive training program in place so you don't become a statistic.**

**BLR Learning has worked with numerous companies to develop training courses and materials to assist in employee onboarding, employee engagement, and technology training.**
